Abstract (en)

[origin: WO9625558A1] The invention pertains to a station platform composed in part of pre-cast concrete members and plain concrete blocks spaced out in the direction of the platform's longitudinal axis, and longitudinal girders which rest on the plain concrete blocks, are of a length approximately equal to the distance between two plain concrete blocks, and on which are supported deck slabs which are spaced to form joints and span the longitudinal girders with overlap on at least one side, characterised in that the cross section of the through-shaped longitudinal girders (3) shows an approximately horizontal base (31) with legs (32, 33) extending upwards and outwards therefrom, the base (31) resting with its ends on separate blocks (2) and the legs (32, 33) being adjusted to bear the deck slabs (4).
