Abstract (en)  
[origin: WO9528535A1] A flashing arrangement for mounting of a roof element in a roof having a thin sheet-formed roofing comprises flashing elements for connection with the main frame members and is made from a sheet material. The flashing elements intended for connection with the side members of the main frame are of a substantially L-shaped cross section with an upright flange portion for bearing against the side member of the main frame and a flange portion protruding substantially parallel to the roof surface. The protruding flange portion is folded to form at least one slot in its longitudinal direction, said slot having an opening facing away from the main frame side member for receiving an edge portion of the thin sheet-formed roofing.
