Abstract (en)
[origin: EP0757367A1] Switching system, in which in each case a number of switch elements are combined in a switch module having a predetermined power input side and power output side. A connection module is added to a switch module. Said connection module is provided with connecting conductors for connecting the switch elements of the associated switch module to the power input side and/or power output side. Preferably, the connecting conductors are in the form of metal connecting strips, which are arranged insulated from one another in the connection module. <IMAGE>
