Abstract (en)

[origin: US5779170A] PCT No. PCT/DE96/00285 Sec. 371 Date Feb. 11, 1997 Sec. 102(e) Date Feb. 11, 1997 PCT Filed Feb. 23, 1996 PCT Pub. No. WO96/26150 PCT Pub. Date Aug. 29, 1996A takeup machine for continuously advancing yarns (1) comprises a spindle revolver (5) mounting two winding spindles (6, 7), which alternate in winding packages (10). The packages are doffed by a servicing automat (doffer) in two positions of the spindle revolver (5) which is moved on step-by-step as the package increases in size on the operating spindle (6). The two positions for removing the full package or packages and for slipping an empty tube or tubes (8, 9) on the previously emptied idle spindle (7) may be located at any desired points within a doffing range (41), since the package mandrels of the servicing automat are caused to follow the idle spindle (7) by suitable sensors.
