Abstract (en)
[origin: EP0758040A2] The floor plates (1) are held by support components at a distance from an under floor (5). The support components are profiles (2,3) or profile connections extending in the direction of the parallel straight lines from end component to end component. The profiles support via feet (4) on the under floor and on them the floor plates locate in the area of the parallel straight lines. Each floor plate locates on two adjacent profiles or profile connections. At least one of the end components is a wall, a stairs step, a further floor or a fireproof bulkhead. The feet have a base (7) fixed to the under floor. An upper foot part is height adjustably connected to the base.
