Abstract (en)

[origin: WO9530515A1] For each grinding wheel (10) there is provided a bush (21) which supports an individual grinding wheel (10) and is rotatably coupled to a longitudinal member (41) about a fixed axis of rotation (S) perpendicular to the support surface (P) for the slabs; the grinding wheel (10) is rotatably coupled about its axis (M) to the longitudinal member (41); the axis (M) forms a small angle with the axis (S) of the bush (21), the centre (C) of the active face (11') of the grinding wheel (10) being positioned on or relatively close to the axis (S) of the bush (21); both the bush (21) and the grinding wheel (10) are rotated about their respective axes (S and M)
