Abstract (en)

[origin: WO9530810A1] In the connection and butt-jointing of components consisting of plasterboard panels or the like and other components, a filler is packed into the joints and a reinforcing strip applied. In order, in particular, to prevent the formation of irregular cracks, the reinforcing strip (6) takes the form of a strip with narrow perforations (30) and deformable in at most one plane, in which the hole diameter is 3 mm at the most and preferably 1.5 mm at the largest.
