Abstract (en)  
[origin: EP0758543A1] A disposable absorbent article (1) comprises a liquid-absorbent core (4) disposed between a liquid-permeable topsheet (2) and a liquid-impermeable backsheet (3). The core (4) is provided intermittently in longitudinal and transverse directions thereof with a plurality of linear slits (15) extending therethrough and extending longitudinally of the article, thereby to promote spread of body fluids. The topsheet (2) and backsheet (3) are bonded to each other along the slits (15) to form linear grooves (16) extending along the slits (15). <IMAGE>
