Abstract (en)
[origin: EP0758709A1] The reinforcement piece is supported on inner walls and or on spacer arms of the inner walls. The reinforcement piece is L-shaped with the longer arm possessing a larger inner width than the shorter arm. The outer wall of the longer arm, at the transition to its narrow side has a larger radius than the inner wall. The transitions between the outer and inner wall of the shorter arm match the radius of the inner wall of the longer arm to the narrow side.
