Abstract (en)

[origin: WO9530435A2] The present invention provides compositions and methods for treating multiple sclerosis. Compositions of the invention comprise at least one peptide or modified peptide of myelin basic protein (MBP) which comprises at least one T cell epitope, and IFN- beta in an appropriate pharmaceutically acceptable medium for either oral, subcutaneous or intravenous administration. Methods of the inven include treatment of individuals who either have MS or are suspected of being susceptible to MS by administering a therapeutically effective amount of a composition of the invention or by administering in a therapeutic regimen, a composition comprising at least one peptide or modified peptide of MBP which comprises at least one T cell epitope and further administering IFN- beta .
