Abstract (en)  
[origin: EP0759493A1] The locking device, in the lintel area (7) of the door jamb (2), has an operating component (8) which is controlled by the passage panel (4), and works in conjunction with a lintel-parallel longitudinal guide (12), and with a closure part (15), alterable, to position for blocking and releasing the stand panel (3). The operating component comprises a push bar (9) linked to the passage panel and pivotable at one end around a pivot axis (19) parallel to the main pivot axis (18). At the other end of the push bar a slide piece (11) is movably fitted in the longitudinal guide. The closure part of the bolt closure (5) is connected to the slide piece.
