Abstract (en)
[origin: EP0759506A1] The compressor has a side plate (4) with suction and pressure connections (5,6). These communicate with a suction (7) and a pressure chamber (8). The chambers are separated from the compressor working chamber, containing the rotor, via a control disc with suction and pressure slots (11,12). The suction chamber contains a wall section for separating part of the fluid from the fluid/gas mixture drawn into the suction chamber. The separated fluid is then collected.
