Abstract (en)

[origin: WO9531383A1] A blister pack (1), with a cardboard backing (2) and a cardboard cover (3) to contain the packed product (6) with a viewing aperture (5) providing a view of at least parts of the product and bordered on at least one side by a securing strip (7) joined on both side edges to the cardboard section via perforation lines (9) or the like and is of such a size that the product can be removed from the enlarged viewing aperture in the folded-out position, is to be improved in such a way that individual products can be removed without the risk of all the products in the package from inadvertently falling out and a plurality of products may be removed at the same time while retaining good product presentation and ensuring re-closure after the removal of the product. This is attained in that the at least one securing strip (7) is secured to the edge away from the viewing aperture (5) via a fold line (8) on the cardboard section (2 to 3), the width of which is substantially smaller than the length of the parallel cover side and that there is a removal strip (10) bordering the viewing aperture (5) which can be pressed in along lines of perforations (11) or the like and can be folded back to remove the packed product (6).
