Abstract (en)

[origin: WO9629160A1] Object: to prevent (1) a flange eating trouble, (2) the abrasion of a side surface of a width fixing horizontal roll and an increase in the frequency of a roll replacement operation, (3) the abrasion of a side surface of a width fixing horizontal roll, and (4) the occurrence of a shave flaw in an inner surface of a flange, during the tandem rolling of UR+E+UF. Constitution: a reverse rolling operation is carried out by setting a horizontal roll distance Wr in a UR mill, a horizontal roll distance Wf in a UF mill and a horizontal roll trunk portion distance We in an E mill to  $Wf > We$ ,  $Wr$ , or  $We < Wf$ ,  $Wr$ .
