Abstract (en)

[origin: EP0760396A1] A method of preventing sticking during cold rolled strip annealing, involving heating up, holding and cooling, in a bell furnace, pref. with forced convection under a protective gas of more than 5% to 100% H₂ and balance N₂, involves covering the strip with a thin surface film during the holding period by oxidn. at above 600 degrees C, the oxidising partial pressure ratio pCO₂/pCO being adjusted to greater than 1 by addn. of 0.3-0.6 g. CO₂ per sq. m. strip surface to the protective gas and by strong disruption of the thermodynamic equilibrium of the homogeneous water gas reaction (K = much less than 0.01).
