Abstract (en)

The invention relates to a glazing system for mounting in front of a window or the like comprising a glazing panel surrounded by a frame having frame parts (1) extending along the edges of the glazing panel (2). Each frame part (1) comprises two elongated profiles (4,5) and each edge of the glazing panel (2) is arranged between a set of two profiles (4,5). Each of said profiles (4,5) has a substantially U-shaped cross section with legs (6,7,10,11) extending parallel to the glazing panel (2). A leg (10) of one profile (5) has been situated between the legs (6,7) of the other profile (4), whilst the leg (7) of the other profile (4) situated between the legs (10,11) of said one profile (5) has been provided with a thickening (9) at its distal end. Said thickening (9) corresponds with the thickness of said glazing panel (2). Means have been provided for shifting said profiles (4,5) with respect to each other in a direction parallel to said glazing panel and perpendicular to their longitudinal extension. <IMAGE>
