Abstract (en)

[origin: EP0760538A2] A connector for a conductor to a busbar has a support 911) with a first clamp (12) for a first conductor comprising a plate 912) and a detachable clamp strap (28) plus a second clamp (13) for the detachable connection of the support to the busbar. There are means to operate the second clamp so that it is operated by the attachment of the first conductor between the plate and its strap. The second clamp has at least one foot (13) and a pivoted lever (22) whose arm 925) is basically parallel to the foot, but can be pivoted with respect to it. To operate the second clamp, there is a hole in the plate through which an ear (24) of the lever projects from below.
