Abstract (en)  
[origin: WO9533242A2] A device for reading or checking a palm print comprises a platform in which a viewing window (21) is provided. The hand (11) of a user is located in a precise manner above the window (21) by a hand location member (22) against which the joint between the thumb and forefinger is located. A reading can then be taken of a portion of the palm print of the user and compared with a known print taken previously to check the identity of the user.
