Abstract (en)

[origin: DE19504219C1] The invention concerns a packaging machine for sealing a cover foil strip (30; 30a) onto a plastics web (11; 11a) which comprises cups (12). The packaging machine comprises a roller arrangement (20; 40) which plastically deforms the plastics web (11; 11a) according to the distances (a) between the cups. The packaging machine can be adapted particularly easily to modified foil parameters or machine tolerances by means of the roller arrangement (20; 40). It is also possible to further process a cooled foil web (11; 11a) located in the packaging machine after pauses in production.
