Abstract (en)  
[origin: WO9533889A2] The invention concerns a paving stone made in particular of concrete, with an outer, preferably hexagonal, profile whose lateral faces (2, 102, 203) face each other when the stone is laid on the road surface or the like and in the laid position can brace each other at least in sections. The lateral faces (2, 102, 203) of the hexagonal stone (1, 101, 201) are each provided with a bracing pattern (3, 103, 104, 215) which ensures that a reliable seal is created in the region of the gap between hexagonal stones (1, 101, 201). Recess cuts (105, 106) and/or a horizontal peripheral groove (205) can in addition be provided in the lateral faces (2, 102, 203), thereby improving the stability of the join and the tightness of the join against penetrating contaminants in the gap region.
