Abstract (en)

[origin: EP0761134A1] A shelf (10), particularly for metal sets of shelves of the type produced by cutting and plastic deformation from metal plate, in which each one of the edge regions (11) of at least two opposite sides (12) is shaped so as to form three longitudinal parallel folds (13,14,15), forming a structural reinforcement (16) having a triangular cross-section and in which one side (17) is parallel to the shelf (10). A fourth fold (18) of the free end (19) of each one of the two edge regions (11) forms an edge flap (20) that abuts against the lower surface of the shelf (10). <IMAGE>
