Abstract (en)

[origin: EP0761139A1] The device (1) comprises an adaptor for a spring lath (2), a fixing element (4) on the floor grid (3) and a spring element (11) to drive power between the floor grid and the spring lath. The adaptor for the spring lath is built as a holed jacket (8) that is rotatably supported in the fixing element on the lath floor grid. The jacket may be equipped with load-bearing bolts (7) that is rotatable in the floor grid/fixing element transition inside a ball socket (9). The jacket may have a bearing ball that is co-operative with the ball socket of the load-bearing bolts.
