Abstract (en)

The invention relates to a device which serves for the conditioning treatment of the skin and/or the hairs, especially in the region of the human face and especially prior to a shaving operation. It comprises profile features (7, 7') as steps, ridges or file-type or rasp-type teeth or calottes or other small projections which are provided on at least a part of the surface of the device. In preferred embodiments, said profile features are provided either on a cap (4) of a shaver or on the rear side of the head of the shaver or on a handle. <IMAGE>
