Abstract (en)
[origin: EP0762217A1] An electrophotographic photoreceptor comprising an electrically conductive support and at least a carrier generation layer and a carrier transport layer formed on the substrate, wherein said carrier generation layer contains a polyester resin having a repeating structural unit of the following formula (I): <CHEM> wherein each of R<1> and R<2> is an alkylene group which may have a substituent; each of R<3> and R<4> is a hydrogen atom, an alkyl group which may have a substituent or an aryl group which may have a substituent, or R<3> and R<4> may together form a ring; Ar is an arylene group which may have a substituent; each of Ar<1> and Ar<2> is a phenylene group which may have a substituent; and each of m and n is from 0 to 10, provided that m and n are not simultaneously 0. <IMAGE>
