Abstract (en)
[origin: EP0762433A1] Protective screen wall consisting of a laminated construction with at least two external wall parts (7,8) and a sheet of radiation-inhibiting material (9) placed between them. In order to combine the protective screen panels to form a protective screen wall, it is proposed that each panel should be provided with connecting means (13,14) at at least one edge. In addition, in order to prevent radiation from passing between the boundary of two panels, housings are provided, for receiving an edge part of radiation-inhibiting material, which is in the form of a T-section (12). <IMAGE>
