Abstract (en)

[origin: EP0762563A2] The lamp fitting has an insulating housing (2) containing at least one movable contact device (4) with contact elements (45,46) and a slot for reception of at least one pin contact (25) of the tubular lamp (26). The width of the slot is reduced after insertion of the pin contact, to bring the contact elements into engagement with the latter against a spring bias, via a cam operating mechanism (22,51)
