Abstract (en)

[origin: WO9532774A1] The invention concerns a device for the detection of goals in ball games, such as table football, with a ball (10) and at least one goal (6). The invention calls for the ball (10) to be provided with a marking (12), and for a sensor (8), responsive to the marking (12), which monitors the goal zone (6) and whose output signal indicates when a goal is scored. The marking (12) may, for example, be magnetic and the sensor a coil (8) surrounding the goal.
