Abstract (en)  
[origin: WO9532082A1] The invention relates to a timber structural component with at least two timber layers in which at least one timber layer (10-10f) has at least one cut-out (24, 24') which, at least on one side and/or in regions, has a structure (12, 12') in which said structure can take the form of grooves. According to the invention, the timber layers run mutually diagonally, whereby the structure (12a, b, c) or grooving of the layers (10', 10'', 10''') preferably run uniformly diagonally to one another.
