Abstract (en)
[origin: WO9534453A1] A set for bimodal transport having use in transferring loads on automobile semi-trailers by railway transport. The set consists of a semi-trailer (100) mounted separably on intermediate rail bogies (200) or on an intermediate rail bogie (200) and on two end rail bogies (300). The semi-trailer (100) has two coupling pins near ends of an outside cross member of the semi-trailer frame while an inside cross member has a seat for supporting bar of the rail bogie (200 or 300). The intermediate rail bogie (200) has two coupling seats placed on the lower adapter and two coupling seats placed on the upper adapter and both adapters are mounted rotatably on two ball-and-socket joints having common axis. The end rail bogie (300) has, mounted on a ball-and-socket joint, a carrying cross beam including a supporting bar and two coupling seats and at the front of the bogie there is a buffer beam.
