Abstract (en)

[origin: WO9532284A1] The present invention provides a nucleic acid encoding a B-lymphocyte specific activator of octamer site-mediated gene transcription, which interacts with the POU domaine of Oct-1 and Oct-2 in order to activate gene transcription, and the protein encoded by the nucleic acid. In a further aspect of the invention, host cells containing or expressing such nucleic acids are provided, as well as methods of using the nucleic acids and cells transformed therewith.
