Abstract (en)

[origin: WO9533356A1] In order to produce a loudspeaker (1), in particular in the form of a column, which can emit sound in all directions but with differentiated sound-wave distribution and particular directional characteristics or a preferred sound radiation, it is proposed that the reflector unit (5) be provided with a conical covering (5a, 5b) which is asymmetric in relation to the loudspeaker's central axis (6).
