Abstract (en)

[origin: EP0763385A1] After delivery of the material into a current of transporting gas, metering gas is added to the latter. All the gas is delivered to the ejector (1) from a source (15) with a constant output rate. The quantity delivered can be adjusted by varying the metering-gas current between the source and the ejector, using a flow-regulator (20). The system can be used for coating the weld-seams of can-frames with powder.
