Abstract (en)

[origin: EP0763485A1] The deodorant applicator comprises a container (4) enclosing the product to be dispensed having an axis of symmetry (X). An applicator (12) in communication with the container has an external applicator surface (16) which is covered by a cap (24). The cap has two orifices (36,38) which cause an air circulation in its internal volume. These orifices are located at different heights along the axis of symmetry in the cap upper surface (28) and a side wall (30). The cover can have a shrink ring mounted on the container to ensure holding it on the container. The applicator assembly avoids the accumulation of the deodorant between the cap and deodorant container.

Abstract (fr)

L'invention concerne un ensemble de distribution d'un produit comprenant un récipient (4) renfermant un produit à distribuer, un organe de distribution (12) du produit en communication avec le récipient, une coiffe (24,42) muni d'un capot (24) coiffant l'organe d'application fixée sur le récipient, la coiffe comportant au moins deux orifices (36,38) aptes à engendrer une circulation d'air dans le volume intérieur de la coiffe, et comportant une frette (42) montée sur le récipient et assurant le maintien du capot sur le récipient, au moins un orifice (38) de la coiffe étant disposé dans la frette. <IMAGE>
