Abstract (en)
[origin: EP0763488A1] The vehicle has a frame shaped adapter (2) which is pivotably attached to the rear opening of the collection container (1). A filler device (5) is releasably joined to the adapter and has extendable supports (6) which allow the device to be decoupled from the vehicle as a free standing unit. The filler plate can be locked into the adapter as the final element of the container, and the locking position is determined by stoppers.
