Abstract (en)
Independent heat exchangers (17a, 17b) are spaced from each other by a suitable distance as inclined to decrease a distance between the upper portions thereof. An elongate plate (26) bridges a gap between the upper portions of the heat exchangers. A cross-flow fan (18) is disposed at place in an opening between the lower portions of the heat exchangers whereas a heater is disposed directly under the elongate plate (26). <IMAGE>
