Abstract (en)
The side parts (1) of the holder adjoin each other at the one edge as against the remaining side edges of the side parts which are enclosed by an elastic ring (2) which is itself releasably fixed (3) in this area. Each side part has an opening (4) contoured to match the object being held so that the openings match or slightly exceed the object dimensions in the vertical direction as compared with the horizontal (9) dimensions of the opening which in part at least are smaller than those of the object. The object comes in preferred vase form, in which case the side parts have the same vertical dimensions but are bulged by 10-20%. Preferred objects can also comprise bottles or bowls or again a lamp. The side parts are additionally supported and the holder is designed so as to be hung from ceiling or on walls.

Abstract (de)
Haltevorrichtung aus zwei Seitenteilen, die mit jeweils einer Kante aneinanderliegen, wobei die Seitenteile im Bereich ihrer aneinanderliegenden Kanten von einem umlaufenden elastischen Ring umfaßt werden, und wobei die Seitenteile jeweils mindestens eine Ausnehmung aufweisen, deren Kontur etwa der Kontur eines zu haltenden Gegenstandes entspricht.
