Abstract (en)  
[origin: EP0764524A2] A compact ink application system for an offset printer has the ink taken from the dispensing blade (8) by a pick-up roller (9) and transferred to the large diameter ink roller (3) via a small diameter ink roller (10) driven by friction contact with the other rollers. The small diameter roller can have a free rolling roller (11) in contact to spread the ink evenly. The free rolling roller is also of small diameter, and two small diameter transfer rollers can be fitted, linked by a free rolling roller and applying ink to the large diameter roller at two points. This provides an even ink density.
