Abstract (en)
[origin: EP0764526A2] The device has two side walls (1) and at least one carrier (2) arranged between them for an ink jet printer (5). A paper lifting mechanism (3) arranged beneath the carrier is connected to a paper feed mechanism (4). The paper lifting mechanism is aligned between the side walls so that the topmost pattern card to be printed can be passed from the paper lifting mechanism by an external paper feed mechanism from below, between the paper feed rollers of the computer-controlled printer, which is open to the underneath.
