Abstract (en)

[origin: EP0765011A2] The contact connectors (1) have a separable contact bridge (2) with slots (4) in its ends ((5) for the cable cores. Resilient contact tongues (6,6') converge from the ends towards a mutual contact surface (7). The connectors are stamped out of an endless strip of electrically conductive material and partially bent before being galvanised and bent into the final position, wherein the ends of the contact tongues come together in readiness for insertion of the completed product into contact mouldings (15) with grooves (15) for the cable cores.
