Abstract (en)

[origin: WO9534701A1] In a mechanical loom having two machine parts which can be moved apart from each other, the region between a whip roll (7), which is preferably housed with a warp beam (4) in one machine part (2), and means (9) for removing the woven fabric (12), which are housed in the other machine part (1), is encapsulated by an upper screen and/or a lower screen. The screens comprise sets of complementary cover sections (23, 24; 27, 28), each of which is mounted on one of the machine parts.
