Abstract (en)
[origin: EP0766210A2] The cover has a part cylindrical flap (38) coupled via at least one lever (44) perpendicular to its pivot axis to a frame. The flap is rotated about the pivot axis via a reversible electric motor, with a cam element (56) mounted on its drive shaft cooperating with a cam follower (58) attached to the lever. The flap is spring biased into the closed position, with a closure hook (68) mounted on the drive shaft cooperating with a hook element (78) provided by the lever, to prevent forced opening of the flap.
