Abstract (en)

[origin: EP0766320A2] A solar cell module comprising a solar cell element and at least a surface side covering material disposed to cover the light receiving face side of said solar cell element, said surface side covering material comprising at least a light transmissive resin and a light transmissive surface protective film situated on the outermost surface side while contacting with said light transmissive resin, characterized in that said surface side covering material has means for indicatively forming a desired display pattern on the light receiving face side of said photovoltaic element, said means comprising (a) a patterned surface region capable of indicatively forming said desired display pattern and (b) another patterned surface region having a surface pattern which is different from that of said patterned surface region (a), and said patterned surface region (a) and said patterned surface region (b) being situated next to each other. <IMAGE>
