Abstract (en)

[origin: EP0766495A2] The audio reproduction system has at least two different acoustic signal sources and at least 4 end amplifier stages for operation of at least 4 loudspeakers (V,H). One loudspeaker group is located at the front of the vehicle passenger space, a second loudspeaker group located at the rear of the passenger space, with a switching device for selecting one or other acoustic signal source, allowing different audio signals to be provided at the front and rear of the passenger space simultaneously without interference.
