Abstract (en)
[origin: WO9633525A1] In order to improve a double-layer battery terminal (1) for the connection of several systems and hence to optimise its handling during manufacture and fitting, the terminal region (5) consists of a double-layer crimped terminal (7) and two other terminal components (12, 13) arranged in extensions (14, 15, 16, 17) of the upper layer (3) and/or lower layer (4) symmetrically to the longitudinal axis (A) of the battery terminal (1).
