Abstract (en)
[origin: EP0766955A1] The end of the tube (13,14) protruding from the bag is closed by a close-fitting seal (32,38). A cap (17) joined to the tube covers the seal and has a main body (18) possessing an opening (27,39) covered by a tear-off closure piece. A lid (24) on the tube, the main cap body or the closure piece, may be placed onto the main cap body when the closure piece is torn off. A base piece (12) may be weldable to the bag and have, at least, two tubes each possessing a radial flange (50) on which the rim of the main cap body rests. The tube can have radially sprung arm fittings (34) from the interior of the cap into detents in the main cap body.
