Abstract (en)

A method for forming framed panels clad with sheets of thermodeformable material, particularly PVC, reproducing the colour and graining of wood, characterised by: machining by pantograph or other machines a surface of a substrate (1) of chipboard, MDF or the like, to display therein two side stiles (4); cladding the substrate with a sheet of thermodeformable material having decorations reproducing the colour and graining of wood; separately constructing two shaped pieces (5) of length and thickness suitable for forming the crosspieces of the panel to be prepared; cladding said shaped pieces (5) with a sheet of thermodeformable material having graining parallel to the longitudinal axis of the shaped pieces; fixing the shaped pieces to the clad substrate. <IMAGE>
