Abstract (en)

[origin: DE19537284C1] The device has sheet guide elements (2), formed as a unit of band-shaped body (2a) and winding roller (2b) charged by a return winding force, for the band. The side facing the sheet-processing machine has holders (3) for the guide elements. At least those holders located within the format adjusting area are adjustable at right angles to the sheet conveying direction (7). The bands consist of a highly elastic material, and have a sheathing or coating of a material with a low friction coefficient.
