Abstract (en)
The present invention positions a magazine (20) on one end of an auto winder (5), supplies a bobbin to a tray (2) from the magazine, loads a bobbin on that tray and transports it to each winding position of the auto winder. As a result, the present invention is advantageous in that the supply of bobbins to each winding unit can be carried out in one place in comparison to a magazine arranged at each winding unit.
