Abstract (en)  
The covering consists of a corrugated supporting panel (3) with ribs (6), an insulating layer (9) and a waterproof covering material. The insulating layer is connected to the supporting panel by fixings (13). The fixings are joined to insert strips (14) adapted to the shape and dimensions of the ribs (6) and joined to them by fixings (18). Alternatively, the insert strips can be of different shapes, either with lengthwise folds or tongues to attach them to the ribs. They can have up-turned lower edges to join them to the fixings between the supporting panel and roof girders (2) below them.

Abstract (fr)  
L'invention concerne une couverture étanche 1 pour toiture comprenant un élément de support profilé 3 présentant au moins une nervure 6, un matelas isolant 9 et au moins un revêtement d'étanchéité 11, le matelas isolant 9 étant fixé par des moyens mécaniques 12, 13 sur l'élément de support profilé 3, cette fixation s'effectuant sur un profil rapporté dont la structure est adaptée à la structure de la nervure, et formant avec elle un espace 19 destiné notamment à rendre non visible en sous-toiture les moyens mécaniques 12, 13 de fixation. <IMAGE>
