Abstract (en)
A fastener is for holding a first panel (P1) (Figure 2) against lifting or hinging relative to a second panel (P2). The illustration shows the fastener in the disengaged position. Spring 30 is used to urge latch member 21 to the illustrated position or to a position in which it underlies the panel P2 when the actuator 17 is generally coplanar with the panels P1 and P2. The fastener includes a lock having a lug 44 which can be turned into engagement with a slot in the sides of the housing 11 upon which the latch and actuator are pivoted, when the latch is in the engaged position. <IMAGE>
